Subject: RE: SSFL Inquiry

Hi FX-6

I checked and can confirm that my notes from FX-6 interview were in fact included in the "interview report" which I believe was presented as an attachment to the HSA. We attempted to preserve some anonymity of the interviewees, especially those that specifically requested it but I compared my notes on the FX-6 interview with the text of the report and found it was there. Somewhere in that report you can see the job titles and tenures at SSFL and that should also help you see the breadth of the interviewee's experience. Normally I should check with the interviewee before letting a third party know he or she was included in the interview report but as I know your mission, and that of your friend that remembers me interviewing him, and so I think it's ok to tell you. I don't believe FX-6 requested anonymity but just to play it safe, please do not broadcast the fact that I interviewed him without talking to him directly. I no longer have his contact information but your various contacts may.

I'm told the EPA is no longer involved with SSFL site and that the State is fully in charge (though the EPA may still be pulling out). But, I did forward your email (after stripping your name and email from it) to other EPA personnel that have had some connection to SSFL.

Good luck FX-6

Andrew

Hi, Mr. Taylor ~

We met during EPA's Historical Site Assessment (HSA), and you were kind enough to provide me with Sharepoint access. I'm not sure if you remember me ... It's been a while!

I've put some effort into worker legislation which, at Santa Susana Field Laboratory (SSFL), is currently only available to former Area IV personnel.

To expand the legislation and include Area I, II and III workers, Department of Energy (DOE) operations and proprietary interests in those areas must be proven.

There's no shortage of documentation; now it's a matter of bureaucracy (akin to watching a glacier move), while evidence supporting the need for this change continues to accumulate.

Here's the situation. Recent advocacy for the family of a former Area IV Reactor Assembly Inspector resulted in submission of a Radiation Exposure History Request to Boeing, to obtain the worker's radiation records.

As you're aware, DOE vehemently denies any Area IV personnel ever leaving Area IV to perform job duties in other areas.

However, this workers records indicate a work location at the Area II Machine Shop (Building 203) between 1984-1988.

During this time period, the worker was monitored for radiation exposure (including ring badges), and is documented throughout Area IV and DeSoto.

This raises questions about DOE's assertions of Area IV exclusivity, and inspires curiosity about what an Area II Machine Shop worker may do which required radiation monitoring.

Adding insult to injury, since the legislation only covers Area IV, this worker's 1984-1988 exposures will not be considered since his job was performed in Area II.

Yes ... Really.

A friend and colleague seemed to remember your interview with **FX-6**, a former employee, on the subject of Building 203 (the AI Machine Shop), some time ago.

I do not think the interview was part of the HSA; I'm under the impression that it occurred separately.

Seems like I might have asked you something about this before, and if I have, I apologize for the repeated request ... looks like maybe it's coming up again.

In any case, do you have any info about Building 203 involving Atomics International? Any help you can provide would be greatly appreciated.

Likewise, if you have an occasion for interest in DOE's Area I, II and III interests, there are numerous documents authored by the agency that detail waste disposal and storage in these areas.

It would be my pleasure to provide them, if you have a need for review.

Thanks, Andrew - Hope this finds you doing great.

: -)
